

Quick setup — if you’ve done this kind of thing before

[Set up in Desktop](#) or [HTTPS](#) [SSH](#)

We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo # Test_AGAIN >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/AnClark/Test_AGAIN.git
git push -u origin master
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/AnClark/Test_AGAIN.git
git push -u origin master
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
